

Ilkka Helanterä, MD, PhD

Ilkka Helanterä, MD, PhD, works as a transplant nephrologist at the Helsinki University Hospital abdominal transplant center and is an adjunct professor of nephrology at the University of Helsinki. His research interests include various aspects of kidney transplantation, such as drug development and outcomes, epidemiological research employing multiple health care registries, delayed graft function, and viral infections. He is involved in the activities of Scandiatransplant as a member of the council of representatives and steering groups of acceptable mismatch and paired exchange programs, and is a coordinating committee member of the Transplant Therapeutics Consortium, a private public partnership program for drug development founded by the American Society of Transplantation. He is an associate editor for American Journal of Transplantation and Transplant International, and is an author in >80 original articles in peer-reviewed international journals
